

ABSTRACT OF THE DISCLOSURE

Systems and methods that provide satellite-based media processing are described. In one embodiment, a system that exchanges media may include, for example, a communications device that may be coupled to a network and to an antenna. The communications device may provide two-way communications with the network and may provide one-way communications with the antenna. The communications may receive media content from the antenna and/or the network. The communications device may send the media content to the network
